

Socket Welding Machine
2000W

RH-4401

- 2000W advanced thermal system with two powerful elements results in high uniform heat during socket welding operation
- Thickened and widened heating plate can store heat for a long time and improve efficiency
- Teflon coated heating plate secures uniform heating and longer lifetime
- Non-stick die heads with uniform and stable thermal conductivity, can be used to melt PB/ PP / PPR / PE and other plastic pipes to achieve seamless welding
- High-quality anti-slip Ronix-designed handle makes it safer to use and more comfortable to hold
- High-performance insulator which is placed between the body and heating plate minimizes the heat transmission between these two parts and reduces waste heat
- Easy to operate manual temperature control for adjusting
- Red light thermal cut-off switch for controlling the heat power in half or full modes
- Applicable complete kit including extra heating plate, safety gloves, meter, PVC cutter and spanners which satisfies all your requirements in socket welding operation

Model	RH-4401
Power	2000W
Frequency	50Hz
Voltage	220V
Working Temperature	240°C-300°C
Welding Pipe Range	20mm-63mm
Thermostat	16A
Weight	1kg
Supplied in	Metal Case in Color box
Includes	Extra heating plate, Safety gloves, 5m measurement tape, PVC cutter, Hex key, Screwdriver, (2) 20mm Socket, (2) 25mm Socket, (1) 32mm, (1) 40mm Socket, 2meters length extension cord
